

FOR IMMEDIATE RELEASE:

Subjects Wanted for Human Trials of Insomnium Project

Oxford, United Kingdom - November 6, 2017 - The Insomnium project is now at a stage where human trials are required, according to the co-founder of Veritas Industries, Dr. Walter Kane.

Despite recent fire related setbacks in the original facility, the Insomnium project is now back on track in a purpose built facility under the new corporate headquarters.

"Insomnium is the future" says Dr. Kane, "and we need some volunteers to help us prove that. We're looking for subjects who are generally healthy, aged between 18-65, have limited family connections, and own a smartphone or tablet."

Throughout its long history Veritas has pushed the boundaries of science, ensuring its scientists are always too preoccupied with whether or not they can do something, never stopping to think if they should, and Insomnium is no different.

Dr. Kane feels that a stable supply of test subjects will ensure the future of the Insomnium project.

"We've been working on Insomnium for many years now and whilst we're not ready to show the world what it is yet, we are ready to show a few lucky applicants. If you think you're made of the right stuff, get in touch."

Founded in 1834, Veritas is a leading bio-research and medicines company that is heavily invested in the future. Since its conception, its co-founders have pushed boundaries in every area of science imaginable. There is no line they won't cross in their relentless pursuit of knowledge.
